

# Sirenum Monitoring

(( sirenum ))

Anticipate and solve staffing issues before they even arise

## Always be in the know when it comes to staff status

To run an effective business, it's critical that your operations run smoothly and efficiently. That's why we've made it simple for you to monitor your workforce.

When you have multiple staff in numerous locations, it's key for you to know where they are when their shift started, and what time they finished. You also need this data to be accurate, auditable, and easily accessible. Traditionally, technology solutions to help with this simply collect sign in and sign out information, which is just not enough.

That's where Sirenum Monitoring comes in.

Sirenum Monitoring enables you to check the health of sites to see if they are sufficiently staffed, and find a replacement if they're not. When your workers arrive at their designated site, they can use the MySirenum mobile app, or scan their contactless card or sticker onto Sirenum Clock to record their clock in and out times, providing you with instant and reliable data.

## Benefits

- Respond to staffing requirements in minutes
- Reliably calculate staff attendance and time without needing to interrupt or change existing processes
- Trust that you have reliable and auditable information
- Improved communication and engagement with your workers

## Effective monitoring enhances your workflow

- **Planning:** Ensures you have enough resources to meet requirements
- **Operational:** Quick and easy ways to adjust or replace resources before any lost hours occur
- **Data:** Drives financial workflows by capturing data accurately without the need for manual time sheet collection

**41% Lower Absenteeism • 80% Reduced Time-to-Fill**

## Sirenum Maps

With employees working in multiple locations and a variety of roles, it's important to know if all shifts are fully staffed.

Sirenum Maps are designed to support your daily operations, and show the health of your sites so you easily see where there are risks of uncovered shifts. Our advanced shift confirmation leverages the nudge theory to improve on-time attendance, reduce absenteeism, and increase engagement.

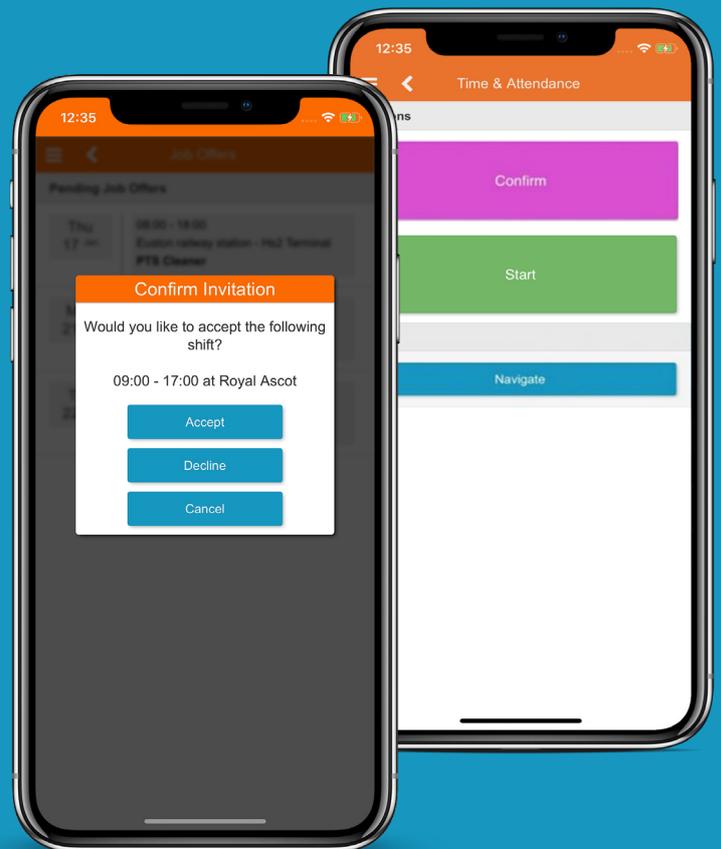

The different coloured visual indicators on the map will represent shifts, locations, sites, or touches, and show where there is potential risk and definite problems. Clicking on each of these locations will highlight risky shifts, and will enable you to select a local replacement worker to prevent lost revenue and poor staff coverage due to uncovered shifts.

## MySirenum Mobile App

Available on all major mobile platforms, the MySirenum app allows workers to accept or reject shifts, confirm they will be attending the shift, and clock in and out of each shift, all on their personal smartphone.

MySirenum enables staff to easily communicate geolocated time and attendance. It allows managers to capture staff data either through the NFC scanner, Bluetooth, barcode, or manually. MySirenum also facilitates patrol activities, increasing safety for lone workers, and simplifying the management and usage of staff-related assets

This live and accurate time and location capture dramatically expedites timesheet approval and payroll processes.
