

Workforce Engagement Analytics ((sirenum))

Track and improve your employee engagement

Reduce staff turnover, increase revenue, and reduce risk customisable dashboards

Better engaged employees drive multiple benefits for employers. The more engaged they are, the less likely they are to leave, and the more shifts you fill. It's a win-win scenario.

Our mobile platform, MySirenum, is the most powerful and flexible staff management app on the planet. It gives your employees their own platform to manage and serve themselves when they need it. Being able to manage their own shifts, request reimbursement, share their time and attendance, and access their pay information means your employees become more engaged, leaving you to reap the benefits.

With these User Reports, you're now able to see just how engaged your workers are by showing how many of your workers have downloaded and logged in to the app, and how much it's being used by each worker.

These reports also show you information that will help your day to day operations, like time to fill per worker or by site, how many shifts are not being filled, and lateness per worker. They can also show financial information such as the number of invoices that have been created, and how many invoices have been paid vs. how many have not.

All of these dashboards are built on the Salesforce platform and are completely customisable depending on your company, so you can get the information you need in seconds.

Benefits

- Shows you how engaged your workers are
- Enables you to proactively engage your workers where it's needed
- Provides a clear view on how effective you are filling shifts and where can be improved
- Invoice information can be accessed and shared in seconds
- Created with real time data to ensure you're always up to date with the need-to-know info

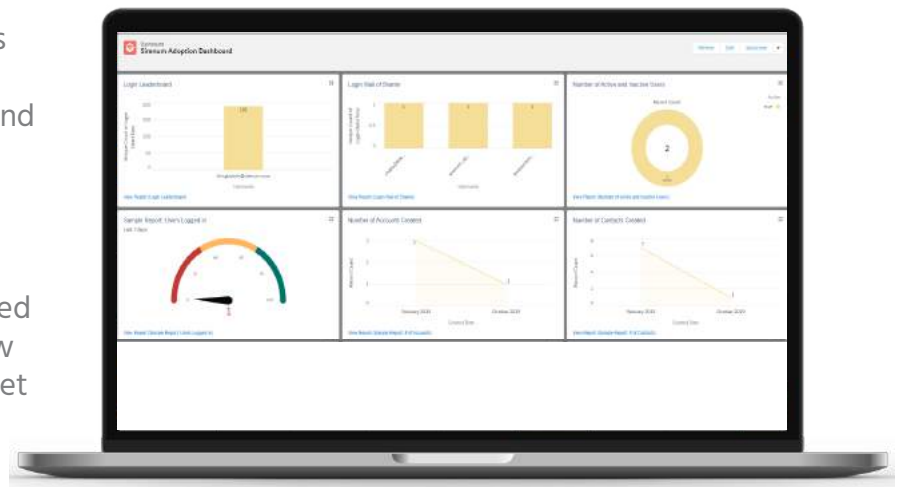

Nearly all our clinicians have downloaded and actively use MySirenum. We're thrilled with how engaged our workers are with the mobile app.

Nurseline

Adoption Dashboard

By better understanding which of your workers are engaged and which are less so, you can be more proactive about encouraging increased engagement, and understanding the reasons why some workers are more so than others.

The adoption dashboard will show you who has logged in, when they last logged in, how many times they log in, and how active your workers are. You can even set up leaderboards to gamify the mobile platform usage across your workforce.

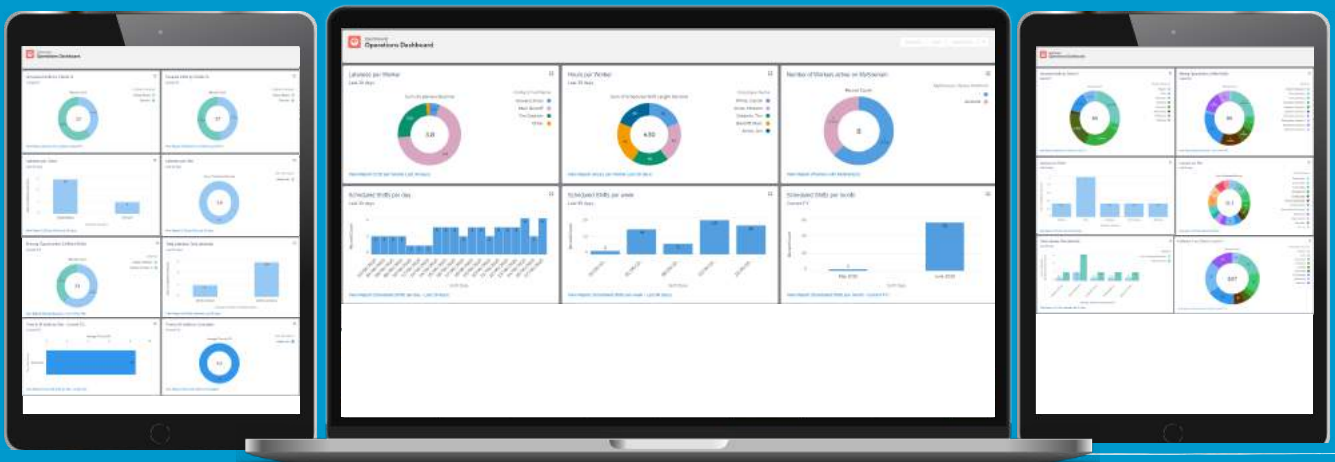

Operations Dashboards

Operational efficiency within your company is key, and these dashboards can help ensure that you're working and performing as best you can.

Uncovered shifts and missed opportunities are just some of the metrics you can highlight in your report to show where you're potentially missing out on ways to generate more revenue. You can also see how long it is taking you to fill each shift requirement by site, consultant, or job type, so you can see where your problems lie and tackle them head on to reduce your time-to-fill.

By using the mobile platform to capture shift start/end times, you can also see worker lateness or uncovered shift information by worker, shift location, or client. Another way to see where your gaps are and continuously improve your operational effectiveness.
